Investment objectives

abrdn Index MPS 4 aims to generate growth primarily through a diversified portfolio of index tracker funds over the long term. It is intended for investors with a medium attitude to risk.
The portfolio invests in a variety of assets, typically in equities, fixed interest, alternatives and money markets. This blend of assets should help to dampen down volatility over the long term.

Investment team

Our MPS portfolios are managed by a dedicated investment management team on a discretionary basis. The team has over 85 years' investment experience in fund selection, asset allocation and portfolio construction. At abrdn, we have a clearly defined investment policy and devote significant resources to making sure it's consistently delivered and continuously developed. We utilise our global, institutional investment capabilities and follow a rigorous process when building all the MPS portfolios within a robust governance and oversight framework.

Important Information

This document is strictly for information purposes and should not be considered as an offer, investment recommendation or solicitation to deal in any of the investments mentioned herein. abrdn does not warrant the accuracy, adequacy or completeness of the information and materials contained in this document and expressly disclaim liability for errors or omissions in such information and materials.

No part of this document may be copied or duplicated in any form or by any means or redistributed without the written consent of abrdn.

This factsheet does not provide individually tailored advice. It has been prepared without regard to individual financial circumstances and objectives of persons who receive it. We recommend that investors seek the advice of a financial adviser. The appropriateness of a particular portfolio will depend on an investor's individual circumstances and objectives.

Investors should remember that the value of investments and the income from them can go down as well as up and that past performance is not a guarantee of future returns.

Performance

Portfolio performance is based on abrdn Index MPS hosted on the abrdn Wrap platform. Portfolio constituents and performance may vary on other platforms. The portfolio has not been available on all platforms since inception. The performance figures may vary due to product specific charges and should be viewed on an indicative basis.

Performance figures are net of the abrdn Portfolio Solutions Ltd management fee and underlying funds OCF. However they do not include the deduction of product and adviser specific charges. The effect of these charges would be to reduce the performance levels shown. In addition, MPS portfolios are subject to fund level annual management charges, which vary over time in line with the composition of the portfolio. Please refer to the relevant Managed Portfolio Service Annual Charges Summary for more information on charges.

ARC Private Client Indices

ARC Private Client Indices are based on actual client portfolio returns provided by various investment management companies. These portfolio returns are allocated to one of four categories based on the volatility of their returns relative to world equities, and an average return is calculated for each category.

Grouping portfolios by their volatility differs from the traditional approach, which compares portfolios which have similar asset allocations. Instead, investment managers may use whatever asset allocation they consider appropriate to achieve the desired levels of return and volatility.

Risks

All investments involve risk. The risks of some of the funds may be comparatively high. The risk descriptions at the end of this document correspond to the main risk factors for each fund within the model. "General Risks" mostly apply to all funds within the model. A fund could potentially be affected by risks beyond those listed described in this document, nor are these risk descriptions themselves intended as exhaustive.

Credit risk: The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.

Interest rate risk: The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.

Equity risk: The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.

Emerging Markets risk: The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.

Derivatives risk: The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

High Yield Credit risk: The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

abrdn.com

EPM Techniques: Underlying funds may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Inflation Risk: Where the income yield is lower than the rate of inflation, the real value of your investment will reduce over time.

Currency Risk: The portfolio may invest in assets which are denominated in currencies other than sterling, and where this exposure is unhedged, the performance of the portfolio may be affected by fluctuations in currency exchange rates.

Negative Yields Risk: If interest rates are very low or negative, this may have a negative impact on the performance of the portfolios.

Money Market & Deposits Risk: A failure of a deposit institution or an issuer of a money market instrument could have a negative impact on the performance of the portfolios.

Capital Risk: All capital invested is at risk. You may not get back some or all of your investment.

Liquidity risk: In difficult market conditions, the portfolio may not be able to sell a security for full value or at all. This could affect performance and could cause the portfolio to defer or suspend redemptions of its shares, meaning investors may not be able to have immediate access to their holdings.
