

Three reasons to go for gold

We believe that ongoing market uncertainty and accommodative monetary policy may support gold investment demand.

Gold is, in our view, a distinct asset class and a core risk management tool. An allocation to gold shouldn't reflect a tactical reaction to market volatility spikes. We view gold as a strategic, long-term hold. We believe its unique investment properties may make gold a critical component of a well-balanced investment portfolio, in high times and low.

1. More than just another commodity

Gold is a commodity — it's a physical object you can hold in your hand. This means, it's a global asset driven by the fundamentals of supply and demand. Taking a look at gold's behavior, however, shows it to be more in line with currencies.

Part of this relationship lies in gold's heritage as a currency. Throughout history, gold served as a medium of exchange for currencies because it's of uniform quality. (The global gold standard only came to an end about one hundred years ago, with the outbreak of World War I.)

Today, we believe its lack of credit risk makes gold an attractive reserve monetary asset among central banks.

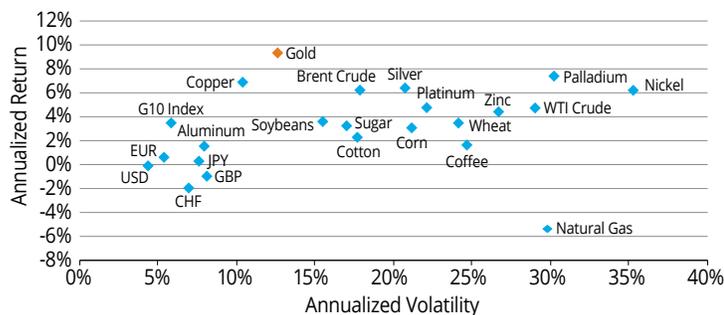

Gold's risk/return profile falls into the currency camp more closely than its precious metal or commodity peers (Chart 1). Gold has the highest correlation to seven out of 10 G10¹ currencies than silver, platinum or palladium. These other precious metals are more akin to traditional risk-adjusted commodity performance. Gold is a commodity, but it's much more than that.

2. Gold may cushion drawdown risks

Gold is a dynamic and multi-faceted potential defense against many forms of risk. It has a track record of protecting investors during severe market drawdowns (Chart 2), remaining resilient during spikes in volatility.

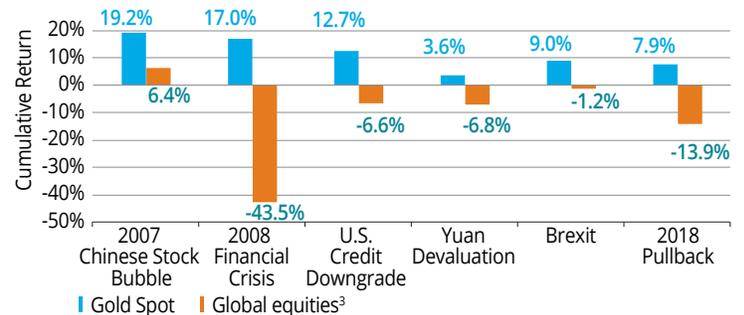

During negative market events, investors' fear and uncertainty may spike. As a result, investors seek stable, defensive investments and global equities typically experience large selloffs. Gold has historically performed admirably when global equities have shown negative returns and large drawdowns (Chart 2). For example, during the biggest drawdown in recent history, the Global Financial Crisis,² gold managed to deliver significantly higher returns than the broad equity market (Chart 2). Precious metals may serve as such an alternative to equities.

Chart 1: Gold behaves more in line with currencies

¹ G10 or Group of Ten refers to the group of eleven industrialized nations that meet annually (or as necessary) to debate and cooperate on international financial matters. Member countries include: Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the UK and the US. Switzerland also plays a minor role

² The Global Financial Crisis refers to the period of extreme stress in global markets that began in 2007 with a subprime mortgage lending meltdown and expanded into a global banking crisis

³ Global equities are represented by the MSCI World Index, an unmanaged index considered representative of stocks of developed countries. The index is computed using the net return, which withholds applicable taxes for non-resident investors

3. A golden diversifier

Gold may perform best when added to a diversified portfolio. Portfolio efficiency tends to increase when investors add gold to a diversified stock/bond investment lineup. This means that with the addition of gold, a portfolio's risk may be reduced, while return may remain the same or increase compared to portfolios without gold allocations.

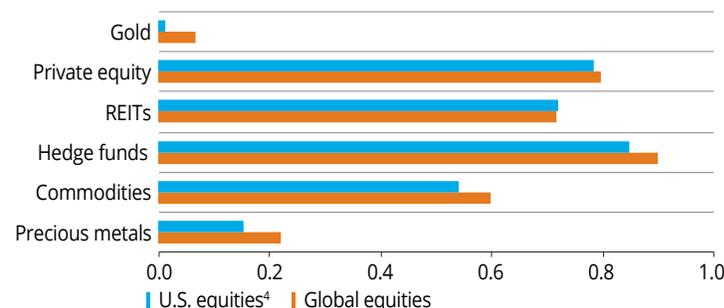

While bonds and cash may also increase portfolio efficiency, gold is an attractive alternative because it is less impacted by interest rates. Rising interest rates put downward pressure on bond valuations, which can make holding them less attractive to investors. Additionally, negative interest rates may push cash yields to negative, on a real basis. Gold may help effectively manage asset allocations and portfolio exposure.

Gold also has a low correlation to equities (Chart 3), so it may diversify a portfolio from its stock allocation. Gold also has a historically low correlation to bonds.

Moreover, this low correlation to major asset classes holds in both times of expansion and recession. During times of expansion, goods and products that rely on gold, such as jewelry and technology, are often in high demand. In times of recession, there is a gold surge among people seeking a financial safe haven. The benefits of low correlation to stocks and bonds aren't limited to any one type of investor or one particular risk profile.

Proper weighting will depend on investors' different risk profiles and individual investment objectives. However, we believe that investors should have some allocation to gold in their portfolios. Investors tend to reach for gold in times of fear. But we believe that a strategic, rather than a reactionary, allocation to gold may be a brighter idea. Whether gold prices continue to hover near highs or retreat, we encourage long-term investors to look beyond the present and consider "going for gold."

Chart 3: Gold has a low correlation to equities compared to other asset classes

⁴ U.S. equities are represented by the S&P 500 Index, an unmanaged index considered representative of the US stock market.

IMPORTANT INFORMATION

The Aberdeen Standard Silver ETF Trust, Aberdeen Standard Gold ETF Trust, Aberdeen Standard Platinum ETF Trust, Aberdeen Standard Palladium ETF Trust and Aberdeen Standard Precious Metals Basket ETF Trust are not investment companies registered under the Investment Company Act of 1940 or a commodity pool for purposes of the Commodity Exchange Act. Shares of the Trusts are not subject to the same regulatory requirements as mutual funds. These investments are not suitable for all investors. Trusts focusing on a single commodity generally experience greater volatility.

In the United States, Aberdeen Standard Investments is the marketing name for the following affiliated, registered investment advisers: Aberdeen Standard Investments Inc., Aberdeen Asset Managers Ltd., Aberdeen Standard Investments Australia Ltd., Aberdeen Standard Investments (Asia) Ltd., Aberdeen Capital Management LLC, Aberdeen Standard Investments ETFs Advisors LLC and Standard Life Investments (Corporate Funds) Ltd.

ALPS Distributors, Inc. is the marketing agent for Aberdeen Standard Silver ETF Trust, Aberdeen Standard Gold ETF Trust, Aberdeen Standard Platinum ETF Trust, Aberdeen Standard Palladium ETF Trust and the Aberdeen Standard Precious Metals Basket ETF Trust. ALPS Distributors, Inc. is the distributor for the Aberdeen Standard Investments ETFs.

Risk Warnings: Exchange traded securities may or may not be suitable for a particular investor. The price of exchange traded securities may go up or down and an investor may not get back the amount invested. Exchange traded securities are priced in either US dollars or Euros and the value of the investment in other currencies will be affected by exchange rate movements. To the extent exchange traded securities are traded in other currencies, their value may also be affected by exchange rate movements. Futures trading is speculative and may result in losses. Past performance is not necessarily indicative of future results.

Restricted Investors: The distribution of the prospectus and the offering, sale and delivery of exchange traded securities in certain jurisdictions may be restricted by law. Any subscription for exchange traded securities should be made on the basis of the prospectus.

Disclaimer: Any investment in exchange traded securities carries with it certain risks, including those risks set out in the prospectus. You should obtain your own independent financial, taxation and legal advice before making any decisions about an investment in exchange traded securities. This information is not an offer for exchange traded securities and should not be used as the basis for any investment decision.

Diversification does not eliminate the risk of experiencing investment losses.

Investors buy and sell shares on a secondary market (i.e., not directly from the Trust). Only market makers or authorized participants may trade directly with the funds, typically in blocks of 50k to 100k shares.

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS. IT IS NOT POSSIBLE TO INVEST IN AN INDEX.
