- Buyback activity captured in the period is on a T+1 basis to coincide with impact to NAV.
- "NAV Impact" represents the anti-dilutive impact on the net asset value per share of the Fund due to the repurchase of capital shares.
- International investing entails special risk considerations, including currency fluctuations, lower liquidity, economic and political risks, and differences in accounting methods; these risks are generally heightened for emerging market investments. There are also risks associated with investing in India, including the risk of investing in a single-country fund. Concentrating investments in the India region subjects the Fund to more volatility and greater risk of loss than geographically diverse funds. Equity stocks of small and mid-cap companies carry greater risk, and more volatility than equity stocks of larger, more established companies.
- The information presented is for informational purposes only. This is not a recommendation to buy or sell or a solicitation of an offer to buy or sell any securities or adopt any investment strategy.

Share repurchases may be made opportunistically at certain discounts to net asset value per share ("NAV") when management reasonably believes that such repurchases may enhance shareholder value. There is no assurance the Fund will purchase any shares or that the share repurchase program will have an impact on the liquidity or value of the Fund or the Fund's shares.
