

Target Return

Managed Portfolio Service - Portfolio 1

Monthly Investment Strategy - August 2019

Aberdeen Standard Capital's Target Return Managed Portfolio Service (MPS) Portfolio 1 is designed to target a return of LIBOR +1% (after assumed fees and charges of 2%) through an actively managed discretionary portfolio.

Key Facts

Target Return: LIBOR +1%*

*6 month LIBOR +1% annualised over rolling 3 year periods

Expected Risk (volatility): 2.0 - 6.0%

Our MPS risk scale:

Launch date: 03 May 2011

Risk profile

The investment strategy for Portfolio 1 looks to find the optimum balance between risk and return potential.

It is likely to be suitable for clients who are prepared to accept only a relatively small amount of risk during the time horizon of their investment.

The strategy is designed with the aim of minimising the possibility of investments falling in value while producing returns greater than those achievable in a deposit account over a three year period. It is designed for customers who, under normal circumstances would feel uncomfortable if their investments fell and rose sharply in value.

This remains an investment management service, and there is risk involved in this portfolio. A secure cash product may be more appropriate for the most conservative clients.

Remember, investors could get back less than they invested.

- ▶ Suitable for investors with basic investment knowledge.
- ▶ Suitable for investors wanting to preserve capital.
- ▶ Suitable for investors wanting a positive absolute return over the medium to longer term (3-5 years) but with easy access to their cash.
- ▶ Suitable for investors who are looking to invest in a standalone portfolio.

Investment strategy

The Aberdeen Standard Capital Target Return investment strategy prioritises the management of market volatility primarily through advanced diversification of portfolio risks. The strategies used are designed to allow customers to benefit from the growth potential offered by market based investments while at the same time managing the risks. This is achieved by avoiding significant holdings in a single market or investment idea and by selecting markets or investment ideas that produce positive returns in differing economic conditions.

We utilise two funds to deploy advanced strategies to the Target Return portfolios. The Standard Life Strategic Investment Fund (SIA Fund) is used to dynamically alter the risks the portfolio is exposed to, for example by using hedging strategies that seek to protect against volatility. We also utilise the Standard Life Investments Active Overlay Fund (AOF) which aims to add alternative return seeking strategies to the portfolio, offsetting some of the hedging strategies held in the SIA Fund. Both these funds are managed exclusively on Aberdeen Standard Capital's behalf by Aberdeen Standard Investments Multi Asset Investment Team*.

**Aberdeen Standard Capital is the discretionary investment management arm of Aberdeen Standard Investments. Aberdeen Standard Investments is a brand of the investment businesses of Aberdeen Asset Management and Standard Life Investments.*

Aberdeen Standard Capital and the MPS Investment Team

Darren Ripton - Head of Investment

Darren Ripton assumed responsibility for the day-to-day investment process in 2009, after joining the company in 2007 as a Client Portfolio Manager. He has been integral to developing the fund selection and portfolio construction process that is used by the business. Darren has twenty years' investment experience, seven of which were spent managing discretionary mandates with ABN Amro Private Bank. His role there included the oversight of all investment funds used within mandates in London, Jersey and Gibraltar offices. He is a Chartered member of the Chartered Institute for Securities and Investment and holds a BSc from the University of Hertfordshire.

Eric Louw - Investment Manager

Eric Louw is an Investment Manager for Aberdeen Standard Capital and has been with the company since September 2007. He holds the Investment Management Certificate, post graduate degrees in Financial Accounting and Financial Analysis & Portfolio Management and is a CFA charterholder. Prior to joining the company, Eric worked at UBS Wealth Management, where he was involved in a major asset transfer project, and at ABN Amro Private Bank, where he was a member of the team responsible for the discretionary management of onshore accounts.

The portfolio is reviewed and rebalanced as appropriate. A more fundamental review of fund selection and asset allocation is completed on a quarterly basis.

This factsheet does not provide individually tailored advice. It has been prepared without regard to individual financial circumstances and objectives of persons who receive it. We recommend that investors seek the advice of a financial adviser. The appropriateness of a particular portfolio will depend on an investor's individual circumstances and objectives. Investors should remember that the value of investments and the income from them can go down as well as up and that past performance is not a guarantee of future returns.

The Strategic Investment Allocation Fund is designed to be used as part of a strategic approach to individual client wealth objectives and should not be considered as a stand-alone investment. The fund is designed to generate an absolute return when viewed with other assets in a client portfolio. As a result, if other assets in the portfolio are performing well, this fund may not produce a positive return.

The Active Overlay Fund is designed to be used part of a strategic approach to individual client wealth objectives and should not be considered as a stand-alone investment.

The Fund is designed to act as a complementary diversifying influence on a Aberdeen Standard Capital global equity allocation.

The use of derivatives in the funds may result in increased volatility in their fund prices. Due to the leveraged nature of derivatives, gains and losses can be greater than associated with traditional investment instruments. The funds will have the ability to hold short derivative positions. This means that the funds will not necessarily follow market trends i.e. if stock markets rise the funds may not do so at the same rate, or at all.
