

30 June 2020

The primary aim of the fund is to maintain capital and provide returns before charges in line with short term money market rates by investing in deposits and short term money market instruments.

The fund price is not guaranteed by Standard Life and there could be circumstances where the fund price may fall. A fall might happen if, for example, there is a default by one of the banks where some of the money is held or where there is an adverse market movement in the value of some of the money market instruments held. A fall may also happen if fund income falls so low as to be less than the charges applied to the fund.

The value of any investment can fall as well as rise and is not guaranteed - you may get back less than you pay in.

#### Definitions

Volatility Rating (0-7) - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments. Volatility ratings are calculated on a scale of 0-7.
