

Aberdeen Standard Investments' MyPortfolio Index Plus Separately Managed Account (SMA) Portfolio III aims to generate growth over the longer term through a combination of enhanced index and tracker funds in addition to selected active funds.

Key Facts

Our SMA risk scale*:

Risk profile

The investment strategy for Portfolio III seeks to generate growth over the longer term while being managed to a level of risk, rather than a level of return. It aims to deliver a reasonable level of return over the longer term with relatively high and frequent fluctuations in value.

It's likely to be suitable for clients who are prepared to accept a medium level of risk over the term of their investment. Aberdeen Standard Investments believes this could apply to clients who are prepared to accept a moderate amount of volatility over their time horizon. They want to reduce the effect of market volatility on the value of their investments but they want them to grow as well. Under normal circumstances, they would not expect their investments to fall and rise very sharply in value. They accept that, in the longer term, a higher level of volatility may result in higher returns.

Remember, investors could get back less than they invested.

- ▶ Suitable for investors with basic investment knowledge.
- ▶ Suitable for investors who can accept large short term losses.
- ▶ Suitable for investors seeking to grow their assets over a period of at least 5 years, with easy access to their cash.

- ▶ Suitable for investors who are looking to invest in a standalone portfolio.
- ▶ Only suitable for clients who have received a recommendation from an adviser.

Investment strategy

Aberdeen Standard Investments' MyPortfolio Separately Managed Account service gives clients access to their investment portfolio construction and risk management skills.

In the initial stages of the investment process, the investment manager decides on the strategic asset allocation that they believe will deliver the best possible returns for a given risk level. They work closely with Moody's Analytics, world-leading experts in risk modelling solutions, to help achieve this. This process helps us build the most efficient long-term asset allocation mix that we expect to generate the highest returns for each level of risk.

This analysis forms a framework for the investment manager to select the right investment funds to fill the asset class buckets, utilising a combination of defensive and growth assets and investment styles particular to each MyPortfolio range. They implement an agile approach to fund selection by blending these funds optimally with the aim of achieving the best risk-adjusted returns.

The portfolios are regularly rebalanced and reviewed to ensure they are meeting the appropriate risk and return outcomes for investors. This involves checking that each portfolio has the optimal mix of assets and funds for its risk level and remains aligned to client needs. We make any necessary changes as quickly and cost-efficiently as possible.

Multi-Manager Strategies Team

James Millard Co-Head of Multi-Manager Strategies

James is co-head of Multi-Manager Strategies and co-manager of the MyPortfolio SMAs. James joined the company in 2014 from Old Mutual Wealth where he was Director of Investments. Previously, he worked at Old Mutual Global Investors as Chief Investment Officer of the multi-manager business.

Matthew Webber Senior Investment Manager

Matthew is a Senior Investment Manager responsible for co-managing MyPortfolio SMAs. Matthew joined the company in 2011 from The Co-operative Asset Management where he was a Fund Manager.

Market review

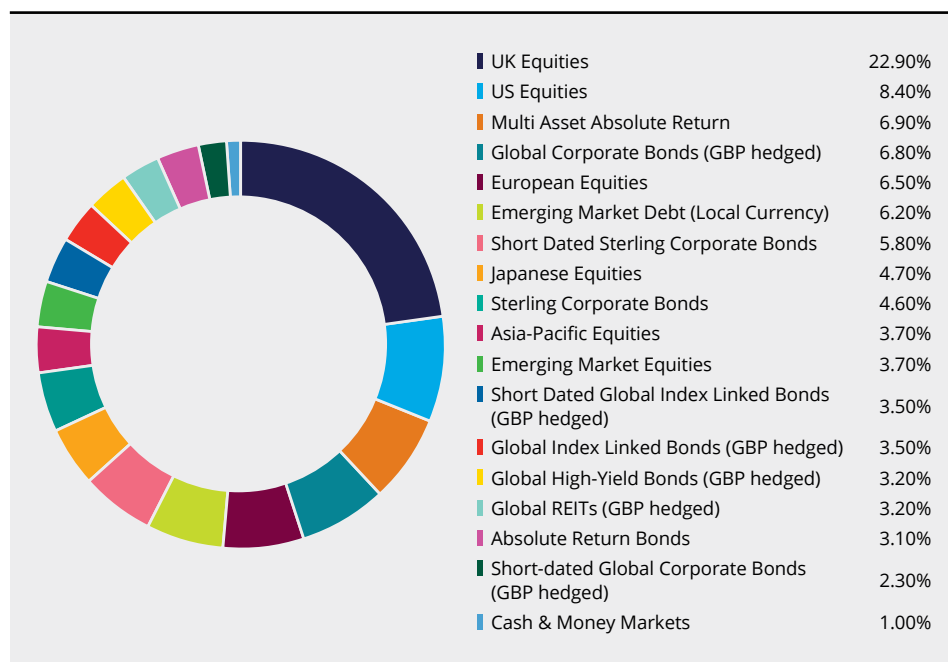

Global equities gained further ground during the second quarter. This was despite a pullback in May, when an escalation in the US-China trade dispute dashed hopes of an imminent resolution. However, central banks in the US, Europe and Japan responded with supportive rhetoric and pledges of fresh stimulus to revive economic growth. Investor confidence received another boost when, at end-June, presidents Trump and Xi agreed a truce in their trade war. Government bonds also benefited from supportive comments from global central banks. US Treasuries rallied strongly as markets priced-in up to three US Federal Reserve interest rate cuts over the next year. German bunds performed well over the period. Meanwhile, UK government bonds rose (yields fell), partly on the back of increased fears of a 'no-deal' Brexit. These factors also helped global corporate bonds rally in the second quarter.

Market outlook

Politics seem to be a key driver of global stock markets, making forecasting more difficult. For example, we are uncertain of the outcome of the US-China trade dispute. However, the market is signalling that this will be a more drawn-out dispute than previously thought. This brings increasing risk of an economic slowdown and further bouts of volatility. Despite this, we remain cautiously optimistic. Central banks have indicated they will act to support their economies if needed. Interest rate cuts are now back on the table. This should support equities. Meanwhile, corporate earnings estimates remain solid. Economics and politics will also influence the direction of government bond markets. With bond yields falling in recent months (to below zero in some cases), history would suggest that investors may again start searching for yield. This should support corporate bonds, which remain moderately attractive.

This factsheet does not provide individually tailored advice. It has been prepared without regard to individual financial circumstances and objectives of persons who receive it. We recommend that investors seek the advice of a financial adviser. The appropriateness of a particular portfolio will depend on an investor's individual circumstances and objectives.

Investors should remember that the value of investments and the income from them can go down as well as up and that past performance is not a guarantee of future returns.
