

# Aberdeen Asia-Pacific Income Fund, Inc.

## August 2020 Performance Data and Portfolio Composition

### Investment objective and policies

The Fund's investment objective is to seek current income. The Fund may also achieve incidental capital appreciation. The Fund will seek to achieve its investment objective through investment in Australian and Asian debt securities.

### Performance

The latest available performance figures have been calculated net of Fund expenses in U.S. dollars for the period ending August 31, 2020:

#### Total return as of August 31, 2020<sup>A</sup> (%)

NAV	Cumulative	Annualized	Market price	Cumulative	Annualized
Since inception (April 1986)	1,190.2	7.7	Since inception (April 1986)	1,031.3	7.3
Ten years	47.1	3.9	Ten years	32.5	2.9
Five years	31.6	5.7	Five years	41.6	7.2
Three years	9.9	3.2	Three years	4.8	1.6
One year		5.0	One year		7.3

<sup>A</sup> Past performance is no guarantee of future results. Investment returns and principal value will fluctuate and shares, when sold, may be worth more or less than original cost. Current performance may be lower or higher than the performance data quoted. NAV return data includes investment management fees, custodial charges, bank loan expenses and administrative fees (such as Director and legal fees) and assumes the reinvestment of all distributions. The Fund is subject to investment risk, including the possible loss of principal. Returns for periods less than one year are not annualized.

#### Important risk disclosure

All performance shown is historical, assumes reinvestment of all dividends and capital gain distributions and does not guarantee future results. Investment return and principal value fluctuate with changing market conditions so when sold, shares may be worth more or less than that of the original cost. Total return based on market price reflects changes in market value. Total return based on net asset value reflects changes in the fund's net asset value during each period. Current performance may be lower or higher than the performance data quoted. This commentary is for informational purposes only, and is not intended as an offer or recommendation with respect to the purchase or sale of any security, option, future or other derivatives in such securities.

Portfolio duration is calculated as the weighted average of the individual securities' duration. The source for the duration figures is Yieldbook and Aberdeen Standard Investments Inc. as of the most recent month end.

Closed-end funds are traded on the secondary market through one of the stock exchanges. The Fund's investment return and principal value will fluctuate so that an investor's shares may be worth more or less than the original cost. Shares of closed-end funds may trade above (a premium) or below (a discount) the net asset value (NAV) of the fund's portfolio. The Net Asset Value (NAV) is the value of an entity's assets less the value of its liabilities. The Market Price is the current price at which an asset can be bought or sold. There is no assurance that the Fund will achieve its investment objective. Past performance does not guarantee future results.

International investing entails special risk considerations, including currency fluctuations, lower liquidity, economic and political risks, and differences in accounting methods; these risks are generally heightened for emerging market investments. Concentrating investments in the Asia-Pacific region subjects the Fund to more volatility and greater risk of loss than geographically diverse funds. Fixed income securities are subject to certain risks including, but not limited to: interest rate (changes in interest rates may cause a decline in the market value of an investment), credit (changes in the financial condition of the issuer, borrower, counterparty, or underlying collateral), prepayment (debt issuers may repay or refinance their loans or obligations earlier than anticipated), and extension (principal repayments may not occur as quickly as anticipated, causing the expected maturity of a security to increase).

The Fund's use of leverage exposes the Fund to additional risks, including the risk that the costs of leverage could exceed the income earned by the Fund on the proceeds of such leverage. Additionally, in the event of a general market decline in the value of the Fund's assets, the effect of that decline will be magnified in the Fund because of the additional assets purchased with the proceeds of the leverage.
