

Target Return Managed Portfolio Service

Monthly Performance Update - August 2019

Aberdeen Standard Capital's Target Return Managed Portfolio Service (MPS) offers a range of five managed portfolio strategies.

Aberdeen Standard Capital's Target Return Managed Portfolio Service gives clients

access to the portfolio construction and risk management skills of Aberdeen Standard Capital's Investment Team. The Investment Team utilises independent strategic asset allocation advice from Moody's Analytics, combined with tactical insights from the Multi-Asset Investing Team at Aberdeen Standard Investments.

This approach utilises a blend of active and passive exposures, depending on the Investment Team's views of which asset classes are likely to offer scope for managers to outperform versus those where a lower cost solution is preferred. The fund selection process involves both qualitative and quantitative research, including face-to-face meetings with the fund managers. It also leverages the considerable expertise of the Aberdeen Standard Investments Multi-Manager Strategies Team.

Portfolio performance is based on Aberdeen Standard Capital MPS hosted on the Standard Life WRAP platform.

Please note that model portfolio constituents and performance may vary on other platforms.

Performance figures shown are net of the Aberdeen Standard Capital discretionary management fee. However they do not include the deduction of product and adviser specific charges. The effect of these charges would be to reduce the performance levels shown. In addition, MPS portfolios are subject to fund level annual management charges, which vary over time in line with the composition of the portfolio.

The figures shown here refer to the past. Past performance is not a reliable guide to future performance. As with any investment, the value of your client's portfolio can go down as well as up and may be worth less than invested.

Target Return MPS Strategies Since Inception (03/05/2011)

Asset allocation for Target Return MPS

Volatility management is achieved via exposure to the Standard Life Strategic Investment Allocation Fund (SIA Fund). This is complemented by a holding in the Standard Life Investments Active Overlay Fund, which adds alternative return-seeking strategies to the portfolio. Both funds use derivatives and other financial instruments that can significantly alter the physical asset allocation.

The Strategic Investment Allocation Fund is designed to be used as part of a strategic approach to individual client wealth objectives and should not be considered as a stand-alone investment.

The fund is designed to generate an absolute return when viewed with other assets in a client portfolio.

As a result, if other assets in the portfolio are performing well, this fund may not produce a positive return.

The SIA Fund is complemented by holdings in the Standard Life Investments Active Overlay Fund, which aims to add alternative return-seeking strategies to the portfolio.

The use of derivatives in the funds may result in increased volatility in their fund's price.

Due to the leveraged nature of derivatives, gains and losses can be greater than associated with traditional investment instruments.

The funds will have the ability to hold short derivative positions. This means that the funds will not necessarily follow market trends i.e. if stock markets rise the funds may not do so at the same rate, or at all.
